Fundamental Neuroscience, 3rd Edition introduces graduate and upper-level undergraduate students to the full range of contemporary neuroscience. Addressing instructor and student feedback on the previous edition, all of the chapters are rewritten to make this book more concise and student-friendly than ever before. Each chapter is once again heavily illustrated and provides clinical boxes describing experiments, disorders, and methodological approaches and concepts. A companion web site contains test questions, and an imagebank of the figures for ready use in presentations, slides, and handouts. Capturing the promise and excitement of this fast-moving field, Fundamental Neuroscience, 3rd Edition is the text that students will be able to reference throughout their neuroscience careers! New to this edition: * 30% new material including new chapters on Dendritic Development and Spine Morphogenesis, Chemical Senses, Cerebellum, Eye Movements, Circadian Timing, Sleep and Dreaming, and Consciousness * Companion website with figures, web links to additional material, and test questions * Additional text boxes describing key experiments, disorders, methods, and concepts * Multiple model system coverage beyond rats, mice, and monkeys * Extensively expanded index for easier referencing

Written by midwives for midwives, Myles Textbook for Midwives has been the seminal textbook of midwifery for over 60 years. It offers comprehensive coverage of topics fundamental to 21st midwifery practice. Co-edited for the second time, by internationally renowned midwife educationalists, Professor Jayne E Marshall and Maureen D Reynor from the United Kingdom with a team of contributors from across the midwifery community it retains its clear, accessible writing style. Most chapters provide useful case studies, websites of key organisations and charities for individuals to access further information. Reflective questions at the end of each chapter as well as annotated further reading aid reflective learning and stimulate discussions relating to continuing professional development. The book covers key frameworks that govern midwifery practice, exploring ethical and legal frameworks that are essential to every accountable, autonomous, professional midwife. Includes employer-led models of supervision, vital elements of leadership and clinical governance that supports the provision of high quality maternity services and standards of midwifery practice. The concept of resilience is introduced for the reader to contemplate their personal contribution in creating an environment that is conducive to protecting the wellbeing of themselves and colleagues within the workplace. The text covers the UN 2030 Agends for Sustainable Development, highlighting the importance of midwives as global citizens with common goals, and together they form a strong global community prepared to challenge social inequalities and take action to help end extreme poverty. Covers designing and implementing high quality midwifery care using evidence, policy and models of care. Highlights why a holistic and evidence-informed approach is necessary to achieve effective care for all. Working examples will help the reader to think critically about their own practice. For this edition several new chapters are introduced covering concealed pregnancy, fear of childbirth (tocophobia), care of the acutely unwell woman and end of life issues including rights of the fetus/neonate and ethical considerations.

The clinical practice of anesthesia has undergone many advances in the past few years, making this the perfect time for a new state-of-the-art anesthesia textbook for practitioners and trainees. The goal of this book is to provide a modern, clinically focused textbook giving rapid access to comprehensive, succinct knowledge from experts in the field. All clinical topics of relevance to anesthesiology are organized into 29 sections consisting of more than 180 chapters. The print version contains 166 chapters that cover all of the essential clinical topics, while an additional 17 chapters on subjects of interest to the more advanced practitioner can be freely accessed at www.cambridge.org/vacanti. Newer techniques such as ultrasound nerve blocks, robotic surgery and transesophageal echocardiography are included, and numerous illustrations and tables assist the reader in rapidly assimilating key information. This authoritative text is edited by distinguished Harvard Medical School faculty, with contributors from many of the leading academic anesthesiology departments in the United States and an introduction from Dr S. R. Mallampati. This book is your essential companion when preparing for board review and recertification exams and in your daily clinical practice.

Get a solid foundation in essential nursing principles, concepts, and skills! Essentials for Nursing Practice, 9th Edition combines everything you need from your fundamentals course and streamlines it into a format that's perfect for busy nursing students. The ninth edition retains many classic features, including chapter case studies, procedural guidelines, and special considerations for various age groups, along with new content including a chapter on Complementary and Alternative Therapies, interactive clinical case studies on Evolve, a new Reflective Learning section, and QSEN activities to encourage active learning. Thoroughly reviewed by nursing clinical experts and educators, this new edition ensures you learn nursing Essentials with the most accurate, up-to-date, and easy-to-understand book on the market. Progressive case studies are introduced at the beginning of the chapter and are then used to tie together the care plan, concept map, and clinical decision-making exercises. Focused Patient Assessment tables include actual questions to help you learn how to effectively phrase questions to patients as well as target physical assessment techniques. Nursing skills at the end of each chapter feature full-blood coloring on the edge of the page to make them easy to locate. Safety guidelines for nursing skills sections precede each skills section to help you focus on safe and effective skills performance. Detailed care plans in the text and on Evolve demonstrate the application of the 5-step nursing process to individual patient problems to help you understand how a plan is developed and how to evaluate care. Unexpected outcomes and related interventions for skills alert you to possible problems and appropriate nursing action. Patient Teaching boxes help you plan effective teaching by first identifying an outcome, then developing strategies on how to teach, and finally, implementing measures to evaluate learning. Care of the Older Adult boxes highlight key aspects of nursing assessment and care for this growing population. Key points neatly summarize the most important content for each chapter to help you review and evaluate learning. Evidence-Based Practice boxes include a PICO question, summary of the results of a research study, and a F description of how the study has affected nursing practice ! in every chapter. Patient-Centered Care boxes address racial and ethnic diversity along with the cultural differences that impact socioeconomic status, values, geography, and religion. 65 Skills and procedural guidelines provide clear, step-by-step instructions for providing safe nursing care. 5-step nursing process provides a consistent framework for clinical chapters. Concept maps visually demonstrate planning care for patients with multiple diagnoses. NOC outcomes, NIC interventions, and NANDA diagnoses are incorporated in care plans to reflect the standard used by institutions nationwide.
