Study Materials Dental Materials

The principal aim of Dental Materials is to promote rapid communication of scientific information between academia, industry, and the dental practitioner. Original Manuscripts on clinical and laboratory research of basic and applied character which focus on the properties or performance of dental materials or the reaction of host tissues to materials are given priority publication.

reducing patient discomfort and allowing the tooth to heal at a faster rate after the procedure. Some dental restorative materials such as acrylic monomers in resin-based materials and phosphoric acid in silicate materials may pose toxic and irritable effects to the pulp. Lining materials protect the tooth from the aforementioned irritants.

Dental material - Wikipedia

Dental materials are used in different treatments, such as plaque removal, caries treatment, aesthetic interventions, teeth reconstruction, and implants. Indeed, dental material could be made from diverse sources, from metal alloys to shape-memory polymers (SMPs).
