It's all-out war. Our cities fall. Millions die. The scum, these cruel aliens from deep space, are determined to kill us all. So we must kill them. Humanity musters its greatest fleet. Thousands of starships rally. Millions of soldiers deploy. For Earth to stand a chance, we must invade the aliens' homeworld. We must destroy their planet. Before they destroy ours. Earth's fleet flies through space. We fly toward millions of enemy ships. We fly to almost certain death. This will be the hour humanity falls . . . or the hour of our greatest victory.

us. Fifty years ago, bloodthirsty aliens devastated the Earth. Most of humanity perished. We fell into darkness. But now we rise from the ashes. Now we fight back. Marco Emery was born into the war. After his mother is killed, he joins the Human Defense Force, Earth's ragtag army. Emery must survive basic training, become a soldier, and finally face the aliens in battle. Against the alien onslaught, Earth stands alone. But we will fight. We will rise. We will win.

human slaves, the Saurons install a puppet president to keep them under control. But President Alexander Franklin and Chief of Security Jack Manning aren't about to play along. Rebellion is in the air, and the fight for freedom is spreading far and wide, from the center of activity in Washington to the distant lands of Guatemala. A diverse group of rebels, including an ex-FBI agent, a doctor inside the heart of enemy territory, and the president will have to band together with a host of other insurgents from across war-torn Earth to overcome impossible odds if they're to save what's left of humankind. With non-stop action and a remarkable cast of characters, the epic conclusion to William C. Dietz's *DeathDay* is a thrilling tale of

Earthrise tells the remarkable story of the first photographs of Earth from space and the totally unexpected impact of those images. The Apollo “Earthrise” and “Blue Marble” photographs were beamed across the world some forty years ago. They had an astounding effect, Robert Poole explains, and in fact transformed thinking about the Earth and its environment in a way that echoed throughout religion, culture, and science. Gazing upon our whole planet for the first time, we saw ourselves and our

place in the universe with new clarity. Poole delves into new areas of research and looks at familiar history from fresh perspectives. With intriguing anecdotes and wonderful pictures, he examines afresh the politics of the Apollo missions, the challenges of whole Earth photography, and the story of the behind-the-scenes struggles to get photographs of the Earth put into mission plans. He traces the history of imagined visions of Earth from space and explores what happened when imagination met reality. The photographs of Earth represented a turning point, Poole contends. In their wake, Earth Day was inaugurated, the environmental movement took off, and the first space age ended. People turned

A spaceship lands on Earth in the year 3060 AD. This group of humans have never been on Earth, and their ancestors were driven off from the planet centuries back. The planet is now ruled by biological computers - that have slightly different biochemistry from the humans, but they are made up of cells that are eerily similar to human cells, though there are some very important differences in the DNA. *****

The untold story of the historic voyage to the moon that closed out one of our darkest years with a nearly unimaginable triumph In August 1968, NASA made a bold decision: in just sixteen weeks, the United States would launch humankind's first flight to the moon. Only the year before, three astronauts had burned to death in their spacecraft, and since then the Apollo program had suffered one setback after another.

Meanwhile, the Russians were winning the space race, the Cold War was getting hotter by the month, and President Kennedy's promise to put a man on the moon by the end of the decade seemed sure to be broken. But when Frank Borman, Jim Lovell and Bill Anders were summoned to a secret meeting and told of the dangerous mission, they instantly signed on. Written with all the color and verve of the best narrative non-fiction, Apollo 8 takes us from Mission Control to the astronaut's homes, from the test labs to the launch pad. The race to prepare an untested rocket for an unprecedented journey paves the way for the hair-raising trip to the moon. Then, on Christmas Eve, a nation that has suffered a

horrendous year of assassinations and war is heartened by an inspiring message from the trio of astronauts in lunar orbit. And when the mission is over—after the first view of the far side of the moon, the first earth-rise, and the first re-entry through the earth's atmosphere following a flight to deep space—the impossible dream of walking on the moon suddenly seems within reach. The full story of Apollo 8 has never been told, and only Jeffrey Kluger—Jim Lovell's co-author on their bestselling book about Apollo 13—can do it justice. Here is the tale of a mission that was both a calculated risk and a wild crapshoot, a stirring account of how three American heroes forever changed our view of the home planet.
