could move around Earth's surface.

Scientific data and observation now allows us to merge the ideas of continental drift and seafloor spreading into the theory of plate tectonics .

Read Book Earth Science Plate Tectonics Study

Plate tectonics and subduction zones are responsible for the way Earth looks, driving the creation of continental plates and the basins that would fill to become oceans. They are also the primary control on the chemical characteristics of the planet's surface and are likely responsible for Earth's ability to sustain life.
