vegetation even in densely foliated areas makes it ideal for archaeology & forestry applications. For coastal zone surveys - accessing inter-tidal zone, or difficult access areas is easily achieved with airborne surveying. LiDAR can provide data for erosion, sediment transport & sea defence studies.

Forestry

Applications Of

~~LiDAR mapping and monitoring, fixed wing, helicopter or UAV~~

Lidar (/ ˈl aɪ dər /, also LIDAR, LiDAR, and LADAR) is a

method for measuring distances by illuminating the target with laser light and measuring the reflection with a sensor.

Differences in laser return times and wavelengths

Read Online

Forestry

can then be used to make digital 3-D representations of the target. It has terrestrial, airborne, and mobile applications.
