Dart is a class-based, object-oriented language that simplifies the development of structured modern apps, scales from small scripts to large applications, and can be compiled to JavaScript for use in any modern browser. In this rigorous but readable introductory text, Dart specification lead Gilad Bracha fully explains both the language and the ideas that have shaped it. The Dart Programming Language offers an authoritative description of Dart for programmers, computer science students, and other well-qualified professionals. The text illuminates key programming constructs with significant examples, focusing on principles of the language, such as optional typing and pure object-orientation. Bracha thoroughly explains reflection in Dart, showing how it is evolving into a form that programmers can easily apply without creating excessively large programs. He also shares valuable insights into Dart's actor-style model for concurrency and asynchronous programming. Throughout, he covers both language semantics and the rationale for key features, helping you understand not just what Dart does, but why it works the way it does. You will learn about Dart's object model, in which everything is an object, even numbers and Boolean values How Dart programs are organized into modular libraries How Dart functions are structured, stored in variables, passed as parameters, and returned as results Dart's innovative approach to optional typing How Dart handles expressions and statements How to use Dart's implementation of reflection to introspect on libraries, classes, functions, and objects Isolates and other Dart features that support concurrency and distribution Register your product at informit.com/register for convenient access to downloads, updates, and corrections as they become available.

The dead of night The Old West town of Lily, Arizona, is home to the Gilded Lily, a former theater...and bawdy house. These days, it offers theatrical productions geared to tourists, but the recent discovery of a skull, a real skull, among the props and costumes shakes everyone up. So, who do you call? The Krewe of Hunters, a special FBI unit of paranormal investigators. In this case, it's agent Jane Everett. Jane's also a talented artist who creates images of the dead as they once were. But the Krewe always works with local law enforcement, and here that means Sloan Trent, former Houston cop and now sheriff. His great-great-grandmother was an actress at the Gilded Lily...and she's not resting in peace. Then more remains appear in the nearby desert. As they search for answers, using all the skills at their disposal, Jane and Sloan find themselves falling into danger—and into love.

"Is titanium for you? Can better brakes reduce lap times significantly? How do you choose the rights nuts and bolts? Which is more important, cornering or straight-line speed? Why did it break again? Engineer to Win not only answers these and many other questions, it gives you the reasons why."--Back cover.
