Lesson 24: Electron Configuration. Shell Game. Electrons are arranged into shells numbered n=1,2,3, and so on. The number of electrons in each shell of an atom correlates with the number where the atom is located on the periodic table. Subshells. S subshells can have a maxium of 2 electrons; P subshells can have a maximum of 6 electrons ; D subshells can have a maximum of 10 electrons; F ...

Shell Game. Purpose: This lesson introduces you to electron subshells. You will explore how they are related to the periodic table. The periodic table shown below indicates the subshell into which the outermost, or last electron(s), are placed for each element. For example, if you relate the drawing of the locations of the electrons for calcium, Ca, with the periodic table, you will find that ...
