Students and beginning counselors get step-by-step guidance for developing the skills and techniques they need to effectively help their clients. This sixth edition of the best-selling *Learning the Art of Helping: Building Blocks and Techniques* emphasizes the techniques and skills necessary to be effective in the art of helping, from basic building blocks to advanced therapeutic techniques. The text is practical, innovative, and focused on the relationship between helper and client. The author incorporates the latest research on effective treatments, while offering an integrative perspective. The author's conversational tone is appealing to students, yet the book is carefully referenced for instructors. The goal is to make beginning helpers become "reflective practitioners." "Stop and Reflect" sections, exercises, homework, class discussion topics, and Journal Starters support this approach. The sixth edition includes new sections highlighting issues of culture in research, challenges related to gender differences, and helping skills specific to children.

"General Chemistry: Atoms First," Second Edition starts from the building blocks of chemistry, the atom, allowing the authors to tell a cohesive story that progresses logically through molecules and compounds to help students intuitively follow complex concepts more logically. This unified thread of ideas helps students build a better foundation and ultimately gain a deeper understanding of chemical concepts. Students can more easily understand the microscopic-to-macroscopic connections between unobservable atoms and the observable behavior of matter in daily life, and are brought immediately into real chemistry instead of being forced to memorize facts. Reflecting a true atoms first perspective, the Second Edition features experienced atoms-first authors, incorporates recommendations from a panel of atoms-first experts, and follows historical beliefs in teaching chemistry concepts based and real experimental data first. This approach distinguishes this text in the market based whereby other authors teach theory first, followed by experimental data.

Helping you focus on mastering the quantitative skills and conceptual knowledge you need to get a true understanding of chemistry, this text continues the tradition of relevance that makes it so effective. Now including MasteringChemistry, the online homework, tutorial, and assessment product with a demonstrated record of helping students quickly master concepts, this edition includes new opportunities for you to practice key concepts. MasteringChemistry provides seamless synergy with the text to create a dynamic learning program that enables you to learn both in and out of the classroom.
