We all saw porno movies with the outcome of what can only be called extreme penis enlargement. And all those starlets loving themselves. Obviously nobody get those kind of phalluses automatically or by birth. So who can claim that penis enlargement does not work?. The hell it does. Now let us explain why it does. The first thing that comes to mind is the way in which modern western medicine deals with the enlargement of living tissue: by traction. It is well known that the way to enlarge the limbs of people that were born with growing deficiencies is buy using traction to make for example legs longer. The physical traction lengthens the bones and the other living tissues that form the human leg therefore all of those tissues must enlarge as an outcome of traction. A side effect observed in this case is that the limb increases its cross section too (not only its length). This increase in the cross section of the limb is due to the fact that living tissue tends to increase the cross section of a physically stressed limb by generating new cells (increasing the mass of the limb) in order to decrease the value of the applied tensile stress per square inch, which will decrease the probability of the limb being severed by share tensile stress. But we saw examples of lengthening by traction in the necks of the Malaysian young girls, that use a number of tight metallic rings to that effect. But we even have a direct example of penis enlargement carried out by hanging increasingly heavier rocks from the penis by the Indian Holly Saduh of the National Geographic Magazine cover. The Karamojong tribe from Uganda are another example of penis enlargement by the traction of hanging rocks. Classical penis enlargement techniques involved for thousands of years the manual stretching of the penis which is another example of physical traction, although this technique was known to be very slow and selective in the sense that it only worked for those that had a strong grip of the upper shaft and head of the penis. (that ability to have a strong grip was otherwise called good luck) Conclusion: penis enlargement is possible by physical traction. The enlargement will be both lengthening and girth increase. The present title will discuss several available products, techniques and devices available widely for penis enlargement and will state their pros and cons. Then it will explain why the use of penis weights hangers is the preferred technique for real penis enlargement and discuss in great detail every and all aspects of the penis weights hanging activities with pictures and explanations that will answer your every question about this important and life changing subject.
