Preliminary treatment of wastewater consists of the following steps: Screening; Comminution; Grit Removal; Flow Equalization; Oil and Grease Removal; Pre-Aeration; 1. Screening. The first unit operation generally encountered in wastewater treatment plants is screening. A screen is a device with openings, generally of uniform size, that is used to retain solids found in the influent wastewater to the treatment plant.

## CHAPTER 2 PRELIMINARY TREATMENT - [wefnet.org](http://wefnet.org)

This manual on Preliminary Treatment sets out the general principles and practices which should be followed by those involved in the treatment of wastewater. It provides criteria and procedures for the proper management, maintenance, supervision, operation and use of the processes and equipment required in the preliminary treatment of wastewater.

### PRELIMINARY TREATMENT

The objective of preliminary treatment is the removal of coarse solids and other large materials often found in raw

Bookmark File PDF Preliminary Treatment For Wastewater Facilities Water Pollution Control Removal of these materials is necessary to enhance the operation and maintenance of subsequent treatment units.

### 3. Wastewater treatment

Sewage treatment facilities use physical, chemical, and biological processes for water purification. The processes used in these facilities are also categorized as preliminary, primary, secondary, and tertiary. Preliminary and primary stages remove rags and suspended solids. Secondary processes mainly remove suspended and dissolved organics.

The purpose of disinfection in the treatment of waste water is to substantially reduce the number of microorganisms in the water to be discharged back into the environment for the later use of drinking, bathing, irrigation, etc. The effectiveness of disinfection depends on the quality of the water being treated (e.g., cloudiness, pH, etc.), the type of disinfection being used, the disinfectant dosage (concentration and time), and other environmental variables.
