Motor Starters are electro-mechanical devices that provide starting and stopping of electric motors by means of manual or automatic switches, and provide overload protection to the motor circuits. Key specifications include the intended application, starter type, electrical specifications including the number of phases, current, voltage, and power ratings, and the features.

~~Types of Motor Starters - A Thomas Buying Guide~~

A starter is a device used to rotate an internal-combustion engine so as to initiate the engine's operation under its own power. Starters can be electric, pneumatic, or hydraulic. In the case of very large engines, the starter can even be another internal-combustion engine. Internal combustion engines are feedback systems, which, once started, rely on the inertia from each cycle to initiate the next cycle. In a four-stroke engine, the third stroke releases energy from the fuel, powering the four

~~Starter (engine) - Wikipedia~~

Price guide (all total, no VAT to pay): Small engine starter motor: £45; Large/diesel engine starter motor: £65 - sometimes more, sometimes less; Alternator repair: £45-65 (the newest alternators may require more expensive parts) More precise quotes will be given on contact; Repair time is one day, possibly half a day.
