Showcasing twenty-three homes representing a variety of styles from around the country, an inspirational guide to decorating with a casual touch explains how to eliminate the clutter, emphasize informal rooms over formal living and dining areas, and create open, light-filled spaces that bring together the outside with interior decor. 25,000 first printing.

In 2004, Lloyd Kahn discovered a group of unique carpenters along the Pacific Coast of North America. Over a two-year period, he made four trips north from his home in the San Francisco Bay Area, up the coast, shooting the photos that appear in this book. To preserve homeowners' privacy, specific locations are not given, but suffice to say this book focuses on the Pacific Coast north from San Francisco up to and around Vancouver Island, British Columbia, latitudes 37 to 49 degrees. There's been a vortex of creative carpentry energy in this part of the world over the last 30 years. Many of the builders shown here got started in the countercultural era of the '60s and '70s, and their work has never been shown in books or magazine articles.

How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate-mediating strategies into their designs, and shows how regional approaches to climate adaptability were essential to the development of modern architecture. Focusing on the period surrounding World War II—before fossil-fuel powered air-conditioning became widely available—Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design, materials, and shading systems as means of interior climate control. He looks at projects by well-known architects such as Richard Neutra, Le Corbusier, Lúcio Costa, Mies van der Rohe, and Skidmore, Owings, and Merrill, and the work of climate-focused architects such as MMM Roberto, Olgyay and Olgyay, and Cliff May. Drawing on the editorial projects of James Marston Fitch, Elizabeth Gordon, and others, he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge, alongside the work of meteorologists, physicists, engineers, and social scientists. Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design. Extensively illustrated with archival material, Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate, showcasing designs from Latin America, Europe, the United States, the Middle East, and Africa. This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever-increasing carbon emissions from the mechanical cooling systems of buildings, and offers a historical foundation for today's zero-carbon design.

This beautifully illustrated book showcases the works of one of Sri Landa's most influential architects—Anjalendran, an ethnic Tamil and visionary artist. During the past 25 years of civil war in Sri Lanka, Anjalendran has stayed on, creating architecture that has attracted interest across the entire Indian subcontinent. In Anjalendran, David Robson explores this unique man and his uncommon vision. Anjalendran's buildings have a simple directness and although totally modern in spirit, they acknowledge the rich design traditions of Sri Lanka. Whether working with ample budgets or at rock bottom cost (like his SOS Children's Village orphanages), his work focuses not only on creative buildings, but—à la Frank Lloyd Wright—also their landscaping, furniture and decoration. Just as interesting as the architecture is the process by which Anjalendran works—from home, never employing more than four student assistants, with no office, no secretary, no car and no cell phone. He operates without a bank account and has never signed a contract with either a client or a builder. With stunning color photographs, plan details and behind-the-scenes insights, Anjalendran sheds light on the works of this exceptional man.
