The first time you execute this command, TI-Nspire CAS returns the solution $y = c_1 e^{ax}$, where c_1 is an arbitrary constant.

Subsequent occurrences of this arbitrary constant are denoted c_2 , c_3 , and so on. To find a particular solution, include the initial condition(s) with the differential equation. For example, the command

Starting with first order equations, the use of an Nspire-CAS calculator makes it easy for students to explore slope fields, numerical solutions with Euler's method or even Picard's approximations for well behaved equations. With Nspire, we can now see graphically how a numerical solution fits when compared to an exact solution.

The TI-Nspire CX CAS can now graph equations in "x=" form. It also has the ability to graph conic sections and solve for points of interest on those conic sections. At one point, there was also the concern by some calculus students that the TI-Nspire CX CAS was missing differential equations capabilities.
