If you are using a UNIX-compatible system (such as Linux, Solaris, or a BSD), most chances are that Perl 5 is already installed there. To verify that, type `perl -v` inside a command shell, and check that the version of Perl is recent enough. If so, you can easily run Perl scripts there. Even if this is not the case, you can usually install it from the distribution you are using, assuming you are ...

Perl has powerful one-liners and even ensures UNIX piping like syntax which can be used on the command line to perform various tasks, also it is influenced by Unix and its command-line programming so integrates many UNIX influenced commands in its coding. Perl is known for its powerful regex and string comparison operations as it is influenced by sed and awk like powerful UNIX tools.
