Valve guides - Materials and usage.

Material choices for guides are down to two distinct types - cast iron and bronze. Yes, cast iron. NOT steel as described in many adverts and by vendors. Never have been, never will be. These are as fitted to the various A-series cylinder heads as standard in all applications.

Its many features include quick and accurate calculations, user-selected units of measurement, selection of pressure relief valve size and style, valve data storage, printed reports, valve specification sheets and outline ...

PRESSURE RELIEF VALVE ENGINEERING HANDBOOK

A valve guide is a narrow tubular piece of metal that can be made from cast iron, Bronze or other composite alloys. On certain engines, these guides can crack if there is a timing failure. This is more common with cast iron guides. Guides can come with different designs, some have circlips, recesses, grooves, protrusions & tapers.
